User Study 02 - RL Audio Notebook

Please click the following two links to read the explanatory statrement and answer the prestudy questionnaire.

Explanatory Statement: https://drive.google.com/file/d/1-8npbW1wg ABzBnnGa1dgEgCaYjDED8o/view?usp=sharing

Consent Form: https://forms.gle/eZMYzwaHG4Bqpgp6A

Pre-study Questionnaire: https://forms.gle/GAU8xzekWKkTMDLVA (Participant ID Required)

Setup

Before starting this Notebook...

- 1. Sub the line of code specifying PWD path on your device to: ./../RL audio/notebooks
- 2. **Install the required packages** (below) to run the notebook
- 3. **Enable JupyterLab Dark**. Under "Settings" --> Theme --> "JupyterLab Dark" (*Optional but recommended*)

```
In [1]: %cd /home/liamroy/Documents/PHD/repos/RL_audio/notebooks
# %cd /Users/liamroy/Documents/Studies/Monash_31194990/PHD/repos/RL_audio/notebooks
# %cd <add your path here and comment out the others>
```

/home/liamroy/Documents/PHD/repos/RL audio/notebooks

In [2]: PWD = %pwd

Packages

Please install the following:

pygame (see this webpage ~ https://www.pygame.org/wiki/GettingStarted) jupyterlab, numpy, termcolor, openpyxl, nbconvert-webpdf

Either use:

- --> sudo apt-get install <package_name>
- --> python3 -m pip install <package_name>
- --> conda install -c conda-forge <package_name>

```
Example using conda:
--> conda install -c conda-forge <package_name>
jupyterlab or notebook
numpy
termcolor
openpyxl
nbconvert-webpdf
```

Imports

```
In [3]: # ~
        # IMPORTS
        import os
        import shutil
        import time
        import numpy as np
        import random
        import argparse
        import linecache
        from scripts import audio control V2 as audio ctrl
        from scripts import ucb1 algorithm V2 as ucb1
        from scripts import misc helpers V2 as mischelp
        import sys
        from termcolor import colored, cprint
        # Termcolor guide: https://pypi.org/project/termcolor/
        # ARGUMENTS & PARSER (Save this code for scripts working with CLI)
        # argParser = argparse.ArgumentParser()

MAIN STUDY (start here)

Welcome to this study's **Jupyter notebook**. In this work, we are developing strategies for improving human-robot interaction with nonverbal sounds (*beeps & boops*).

This study is best completed with headphones. Ensure your volume is on.

While a robot is working on a task, it can have many different internal states. Consider a scenario in which you are guiding a robot as it navigates a maze to find fruit:

If the robot gets lost or stuck behind an obstacle, the robot's internal state is: Stuck

Similarly, if the robot was able to reach it's goal (find a fruit), the robot's internal state is: **Accomplished**

If the robot is actively working on the task (navigating through the maze) but has neither gotten stuck nor completed the task, the robot's internal state is: **Progressing**

In this notebook, you will be asked to run through **3 sections**. In each of these sections, a virtual robot will play a sound. Once you listen to the sound, you will be asked to select which robot state you think the virtual robot is in. You will have the options: **Stuck**, **Accomplished**, **Progressing** and **None of the above**.

In addition to each answer, you will also self-score how confident you are in your response, on a scale from 1 to 10.

This process will repeat several times as a learning algorithm is processing in the background. If you have any questions, ask your study moderator. Have fun!

SECTION 1A

Our first robot is named Jackal

Let's listen to Jackal make a few sounds to express itself.

For each sound, you will asked to select which robot state you think the robot is in.

Click on the cell below & hit 'shift + enter' ...

```
In [7]: mischelp.get user accuracy(sound obj array=sound obj array A, lib str=librar
                         states array=np.ndarray(num of states, dtype=obje
     Robot sound is playing....
      What state is the robot in:
     [N]: None of the above
     To replay the sound: leave the input empty and hit 'enter'...
      Select a state by entering its first letter [S - A - P - N]:
     You entered: S
     Stuck - robot is in trouble and needs your help
     To replay the sound: Leave the input empty and hit 'enter'...
      Score your confidence in this response from [0 to 10]
      or

Great job! The system terminated successfully at itter: 18.
Click on the next cell below and hit 'shift + enter' to continue

Jackal Robot

Section 3A

We're nearly finished ~ home stretch!

Let's listen to Jackal express itself one last time.

For each sound, you will asked to select which robot state you think the robot is in.

Click on the cell below & hit 'shift + enter'...

In [11]: mischelp.get_user_accuracy(sound_obj_array=sound_obj_array_A, lib_str=librar states array=np.ndarray(num of states, dtype=obje
